Acetone is an organic colourless solvent and one of the simplest ketones with various applications. There are a number of markets in which acetone is used strictly for cleaning purposes since it is a powerful cleaner for removing grime, grease, soil and debris. It has excellent degreasing properties.

Some of the markets that use acetone for cleaning are: aerospace, electronics, coatings, inks, metalworking, welding and fabrication, personal care, and textile. Acetone is used in the personal care and pharmaceutical industry to deliver different ingredients in a product as an excipient. Acetone is used as an excipient and is also used to denature alcohol.
